

SoterSpine

Wearable technology for improving physical wellbeing in the workplace

Musculoskeletal injuries account for over 40% of all work-related sickness, causing pain and distress to over 100,000 individuals per year and costing businesses millions of pounds.

Available from Stanley, the Soterspine wearable device and app-based training programme enables employees to improve ergonomic practices and avoid physical injury in the workplace.

Utilising artificial intelligence (AI) to identify hazardous actions by continuously measuring movement, frequency and forces on the body, Soterspine allows employees to manage their own physical wellbeing and helps businesses to reduce risk.

stanley

SoterSpine

Benefits

- Discreet, non-invasive wearable device
